

# ONE Month Protection

1 ml Ampoule

# NORIFAM

(Norethisterone Enanthate 50mg+ Estradiol Valerate 5mg)

## ONE MONTH PROTECTION

Effects primarily on ovulation inhibition and alteration of the cervical mucus.

### MORE CONVENIENCE:

Ideal for short term family planning (1 injection/month)

### RAPID RETURN TO FERTILITY:

Usually within 60 days of last injection

### UNBEATABLE EFFICACY:

Pregnancy rates <0.5%

### LESS INCIDENCE OF BREAKTHROUGH BLEEDING:

If the treatment is continued, bleeding occurs at 30 day interval

ONE  
MONTH  
PROTECTION

**DOSAGE:** The first intramuscular injection is given on the first day of a cycle (1st day of bleeding). The following injections are to be given regardless of the cycle patterns at intervals of  $30 \pm 3$  days, i.e. minimum 27, maximum 33 days. Last injection interval should not exceed 33 days as the coverage of contraception will be inadequate.
