

# ZAFTOLIN

## INHALER

Salbutamol BP  
200 Metered Inhalations

**Bronchospasm, Acute & Chronic Asthma**  
**Acute & Chronic Bronchitis, Emphysema and Prophylaxis in exercise induced asthma**

**Prescribing Information: Action:** Salbutamol is a selective beta<sub>2</sub> adrenoceptor agonist acts on the beta<sub>2</sub> Adrenoceptor of bronchial muscle. **Indications:** Acute Bronchospasm, Acute & Chronic Bronchial Asthma, Acute & Chronic Bronchitis, Emphysema and prophylaxis in exercise induced asthma. **Contraindications:** History of known hypersensitivity to salbutamol and propylhexane in exercise induced asthma. **Precautions:** Salbutamol should not be used with other beta<sub>2</sub> agonists. Salbutamol should not be used with beta blockers (i.e. propranolol). **Warnings:** Salbutamol should not be used with beta blockers (i.e. propranolol). **Precautions:** Should not be over dosed with salbutamol, with monoamine oxidase inhibitors (MAOIs), cases of hypertoxosis. The safety of ZAFTOLIN-INHALER is not established in the first trimester and in lactating mothers. **Side Effects:** Mild tremors, headache, muscle cramps, hypersensitivity reaction (i.e. angioedema, hives, bronchospasm, hypotension) and in case of paradoxical bronchospasm, therapy should be discontinued and alternative therapy should be instituted. **Overdosage:** Cardio selective beta blocking drug is the preferred antidote of over dosage with salbutamol. **Dosage And Administration:** ZAFTOLIN-INHALER should be used on regular basis and the frequency of administration should only be increased on medical suggestions or advice.

#### Indications:

Quick relief of acute bronchospasm  
Maintenance or prophylactic treatment  
Action in exercise induced bronchospasm.

#### Adults

100/200mcg  
200mcg 3-4 times a day  
200mcg before exertion

#### Children

100mcg  
100mcg 3-4 times a day  
100mcg before exertion
